FOR IMMEDIATE RELEASE

Fantech Heat Recovery Ventilators Now Feature Aluminum Cores

SARASOTA, FLORIDA — Fantech is committed to Improving Indoor Air Quality Through Better Ventilation by investing in new product development and product improvements. One such product improvement is the move to aluminum cores in all Fantech Heat Recovery Ventilators.

Fantech has made a substantial investment in the development of an automated machine that produces aluminum cores in-house. Producing our own aluminum cores allows for greater quality control and future design flexibility.

Fantech chose to replace the polypropylene core in the entire line of HRVs with aluminum for many reasons.

- Aluminum defrosts more efficiently
- Does not promote release of harmful gases if subjected to fire.
- Easier to clean.
- Can be used for residential and commercial applications.
- Lifetime warranty

If you'd like more information on Fantech's HRVs or our complete line of Indoor Air Quality Products, call 1-800-747-1762 or click on www.fantech.net.
